POLISHING POLICY

Due to the variance of surface finishes inherent in available stainless steel product, Silver Star Metal Fabricating will polish your material on a best effort basis. We are unable to guarantee a surface free of pitting, faint blemishes, and subtle variations in the finish due to welding. All welded areas are ground smooth and blended into the original finish to create a nearly undetectable seamless look.

Silver Star Metal Fabricating will always work with our customers to ensure the best possible polished product is delivered.
